# Agustin Becerra

*Full-Stack Engineer & Technical Lead · TypeScript · React/Next.js · Node.js · Payments*

Nueva Helvecia, Uruguay · Remote · +598 9844 8110 · becerra.gonzalez.agustin@gmail.com · LinkedIn · GitHub · Portfolio

## SUMMARY

Full-Stack Engineer and Technical Lead with 10+ years shipping production web products in Uruguay, Ireland, and the U.S. (remote). Primary stack is TypeScript across React, Next.js, Angular, and Node.js (Express/NestJS), with repeated ownership of payments, embedded widgets, CI/CD, and production reliability. Recent work: founder/lead on Remi Wallet (USDC remittances live on Hedera mainnet — a public blockchain network similar to Ethereum, where we ship Solidity contracts) and contract full-stack on Foodgawker (headless WordPress → Next.js on Vercel). Earlier: Technical Leader on RYPT and full-stack ticketing at Halo Media. Targeting Full-Stack / Technical Lead roles where end-to-end ownership matters more than a tool checklist.

## TECHNICAL SKILLS

**Frontend:** TypeScript, JavaScript (ES6+), React, Next.js (App Router, SSR/SSG/ISR, Server Components), Angular, Redux, HTML/CSS, PWA, embedded widgets in WordPress/Angular/React hosts

**Backend:** Node.js, NestJS, Express.js, REST APIs, webhooks (HMAC, idempotency), JWT auth, PHP, Python, WordPress REST API / custom plugins / headless CMS

**Data & jobs:** PostgreSQL, Prisma, Redis, BullMQ, MongoDB, SphinxSearch

**Infra:** Docker, Vercel, Fly.io, Cloudflare, Azure pipelines, Heroku, Netlify, CI/CD, Git

**Payments & compliance:** Stripe, Square, USDC on Hedera mainnet (blockchain similar to Ethereum; Solidity), MetaMap KYC

## EXPERIENCE

### Founder & Lead Engineer | Remi Wallet (AG Software)

Feb 2026 – Present

*Nueva Helvecia, Uruguay · Founder · remiwallet.app*

- Built Remi Wallet, a USDC remittance product for LATAM corridors under a Hedera ecosystem grant; live on Hedera mainnet (a public blockchain comparable to Ethereum) with a fiat off-ramp through a regional payout partner.
- Designed the payout state machine: partner webhooks map external statuses onto internal states, HMAC-verified, deduplicated at the schema, and idempotent so a duplicate webhook cannot double-spend.
- Stack: NestJS API on Prisma/PostgreSQL with BullMQ on Redis (Fly.io); Next.js 14 App Router PWA; Solidity smart contracts on Hedera mainnet (EVM-style contracts, same language as Ethereum) using the token-service precompile, session keys, and a 2-of-3 admin threshold.
- Integrated MetaMap KYC with OCR profile extraction; structured logging with PII redaction, an immutable audit log, and a multi-job CI pipeline.

### Full-Stack Engineer | Foodgawker / Amplify Tech Labs

May 2025 – Present

*Chicago, USA · Contract, remote from Uruguay*

- Decoupled a legacy WordPress site into a headless architecture: Next.js on Vercel consuming custom WordPress REST APIs, with SSR/SSG/ISR and Cloudflare edge caching, leaving the WP admin in place.
- Designed the request path and auth: Cloudflare → Vercel Edge → Next.js Server Components with JWT-backed user actions; WordPress remains the source of truth.
- Built a WordPress plugin to manage public endpoints and integrated SphinxSearch for relevance-ranked, faceted search.
- Set up staging→production CI/CD: Vercel builds with protected releases; WordPress deploys via DreamHost/SFTP plus database migrations.

### Software Engineer Consultant | Criptala

Oct 2023 – Dec 2025

*Montevideo, Uruguay · Contract · overlapped with KTO*

- Reviewed product architecture and security posture; flagged issues and tightened development pipelines and release hygiene.
- Improved maintainability with hooks and documented development flows so the team could ship with less tribal knowledge.

### Frontend Engineer | KTO

Jan 2024 – Dec 2024

*Montevideo, Uruguay · Contract*

- Hardened frontend workflows, documentation, and code-maintainability hooks while delivering product features.
- Integrated KYC into the frontend application to meet licensing requirements.

### Full-Stack Developer | Halo Media LLC

Sep 2021 – Sep 2023

*New York, USA · Remote*

- Built white-label ticketing: embedded React apps inside third-party sites (Angular, React, WordPress) for concert and touring-show checkout.
- Integrated Stripe and Square; owned Heroku and Netlify deploy pipelines. Led an internal affinity group of 10+ people.
- Shipped ticketing widgets and payment work across client brands (including FIBA WC-2023 layers in a monorepo, Circus Vazquez, Funbox) with shared middleware to normalize partner data.

**Full-Stack Developer & Technical Leader | RYPT** Aug 2018 – Sep 2021

*Dublin, Ireland*

- Tech lead and frontend architect for a trainer–athlete platform (workouts, performance graphs, billing). Built the Angular app from v2 and kept it current through successive framework versions.
- Implemented Stripe billing; Express.js/Node backend; Jest + Puppeteer E2E suite on Azure Docker pipelines.
- Owned architecture trade-offs, delivery cadence, and the Azure CI path that took frontend + tests from commit to an environment the team could trust.

**Frontend Developer | OneTree** Feb 2017 – Jun 2018

*Montevideo, Uruguay*

- Delivered Agile frontend work for U.S. clients on AngularJS, Angular 2+, React, and Node.js, with a focus on UX and runtime performance.

**Software Engineer Intern | Cisco Systems** Mar 2015 – Sep 2015

*Galway, Ireland*

- Worked on the Jabber Windows client in C# / .NET on a large Scrum team; exposure to enterprise release process and low-level debugging.

## PROJECTS & DELIVERY PATTERNS

- On-chain + off-chain payments: USDC settlement on Hedera mainnet (public blockchain similar to Ethereum; Solidity contracts) plus Stripe/Square and an HMAC-verified, idempotent payout state machine (Remi).
- Widgets that live on someone else's site: embedded React checkout inside Angular, React, and WordPress hosts (Halo Media / white-label ticketing).
- Legacy CMS without a big-bang rewrite: WordPress stays source of truth; Next.js + Vercel + Cloudflare take the public site (Foodgawker).
- Long-lived frontend leadership: Angular app taken from v2 through later major versions, with Express backend, Stripe, and Azure Docker + Jest/Puppeteer CI (RYPT).

## EDUCATION

**Computer Information Systems Analyst** · Universidad de la República (UDELAR), Uruguay · 2018

**Chainlink Hackathon / Web3 coursework** · Full-stack dApp track · 2023

Languages: Spanish (native), English (fluent), Portuguese (basic).
